

Human-Computer Interaction

Homework 3. Wireframing

Team members:

- Blaž Kocjan
- Davor Fon
- Erik Kukovec
- Pelivanov Dimitar
- Markovska Jovana
- Žiga Holc

Problems and improvements

In our observation we discovered some problems. The first one occurred on changing the language of the e-classroom. Our subjects did not find it easy, because it is only written in our language and it is not as visible as it should be. Our solution to addressing this problem is, adding pictures with flags next to the Slovene and English language options.

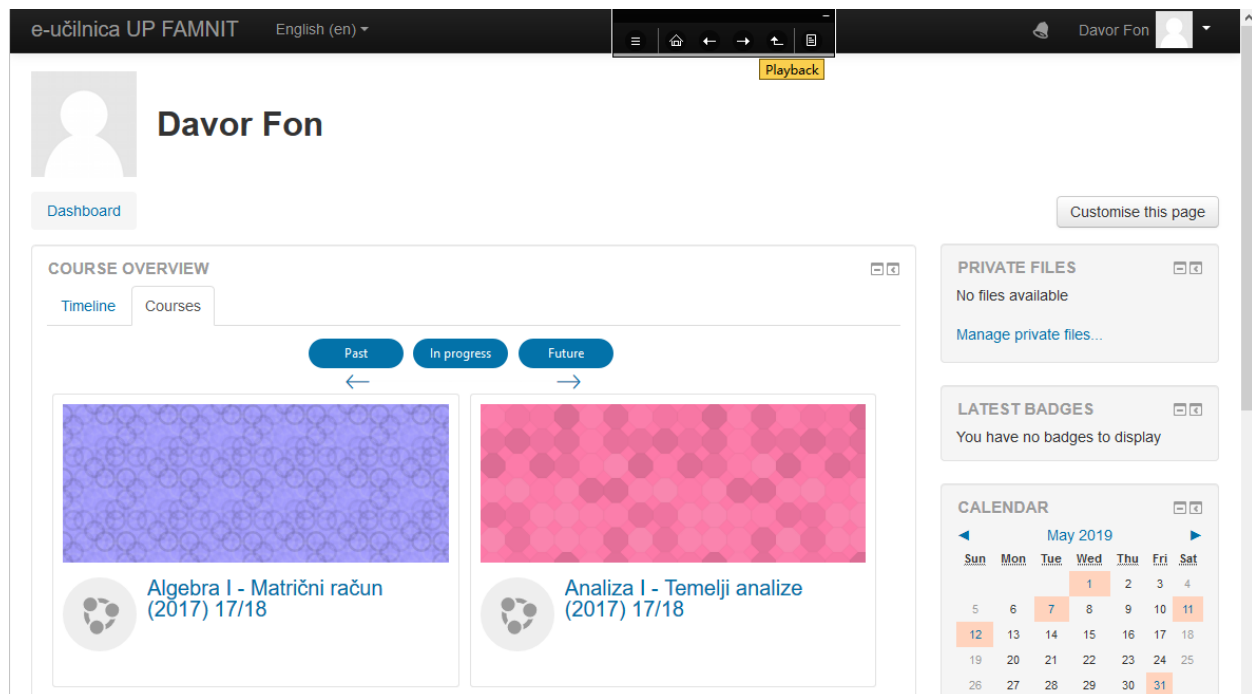

The second problem we are addressing is about notifications. Few of our subjects found it hard to find the notification bell. Notification bell is grey on a black surface area. We agreed on painting it a different color and adding text next to it.

The third problem is about buttons for courses that are in progress, future and past. Somehow, our subjects had problems discovering those buttons, even that the buttons were in their own language. For our solution we agreed on adding arrows and making them more visible.
